## Why are BioCote® protected products better than other antimicrobial products on the market?

Products carrying the BioCote® brand contain silver ion technology. This technology further enhances the performance and value of Waterlogic's water dispensers, whilst remaining technically compatible with their materials and applications.

Crucially, BioCote® additives are registered with the EPA and BioCote® technology is regulatory compliant across the globe.

All BioCote® protected dispensers are scrupulously tested before going to market to ensure they deliver the required levels of antimicrobial performance associated with the BioCote® trademark.

Ongoing quality control testing on Waterlogic's dispensers ensures that the BioCote® protected parts continue to deliver levels of antimicrobial performance that can be relied upon.

BioCote® protected products are the only antimicrobial products proven to deliver a real-life benefit in multiple environments. This has been measured and demonstrated in hospitals, care homes, schools, food processing environments and more.
